

STORM Global Area Network Portable Satellite Terminal

The global office becomes a reality with EMS's STORM Portable Satellite Terminal. You can work and keep in touch from remote situations - far from telephone networks, or without any other means of communicating with your headquarters, command post or broadcast studio. Talk, conference or exchange data at ISDN speeds, from anywhere in the world, using the Inmarsat Global Area Network.

- ➔ Access corporate networks to send geological data Direct from the survey site
- ➔ Manage vital communications for disaster relief and peacekeeping
- ➔ Set up video conferencing facilities and Telemedicine links
- ➔ Use email and Internet browsers from any location
- ➔ Send up-to-the-minute broadcast quality audio as the news happens
- ➔ Send back pictures and video clips for on-air transmission
- ➔ Quickly establish secure communications channels in government and defense applications

STORM also supports Inmarsat's popular Mobile Packet Data Service (MPDS) - an "always" connected" service suitable for web browsing and email. This is very cost effective for low data transfers as it is billed by the Mbit and not by the time connected.

With the rugged, lightweight EMS STORM, the problems are solved - set it up quickly, anywhere, and start communicating.
